

HIGHER EDUCATION

NUREVA® AUDIO CONFERENCING SYSTEMS

SOLUTIONS FOR HYBRID LEARNING ENVIRONMENTS

BUILT FOR OUR NEW REALITY

There's no question – higher education is facing a rapidly evolving landscape. Discussions about in-class, online, synchronous, asynchronous, hybrid and HyFlex learning abound, while postsecondary institutions grapple with how to best engage a student population that's partially or fully remote. Plans are made and then made again. Nothing seems to be normal or steady state. How can IT managers and administrators deliver education safely in this changing environment?

One thought immediately comes to mind – select and deploy flexible solutions that respond to a variety of needs. Nureva classroom audio solutions deliver flexibility, performance and more.

Nureva audio is the simplest and most flexible way to equip the hybrid learning spaces on your campus. Thanks to Nureva's Microphone Mist™ technology, you get full-room coverage in all your rooms, with no need for lapel mics or complex, expensive technical setups.

With Nureva audio, instructors can teach as they always have, connecting with students naturally no matter where they are. Students can hear and be heard, whether sitting distanced within a classroom or connecting from home or a dorm room. And IT staff are saved from the complications that come from in-person visits and manual system calibration. It's classroom audio conferencing, built for the new reality.

ENGAGING REMOTE STUDENTS

Let's face it – if students can't hear what's going on, they can't engage. Our products give remote students as close to an in-class experience as they can get.

WHY CHOOSE NUREVA AUDIO?

The Nureva HDL200, HDL300 and Dual HDL300 audio conferencing systems are an ideal match for the current reality and prepare you for whatever comes next. Here's how they help create the conditions for a successful hybrid approach to teaching and learning in your postsecondary institution:

BUILT FOR PHYSICAL DISTANCING

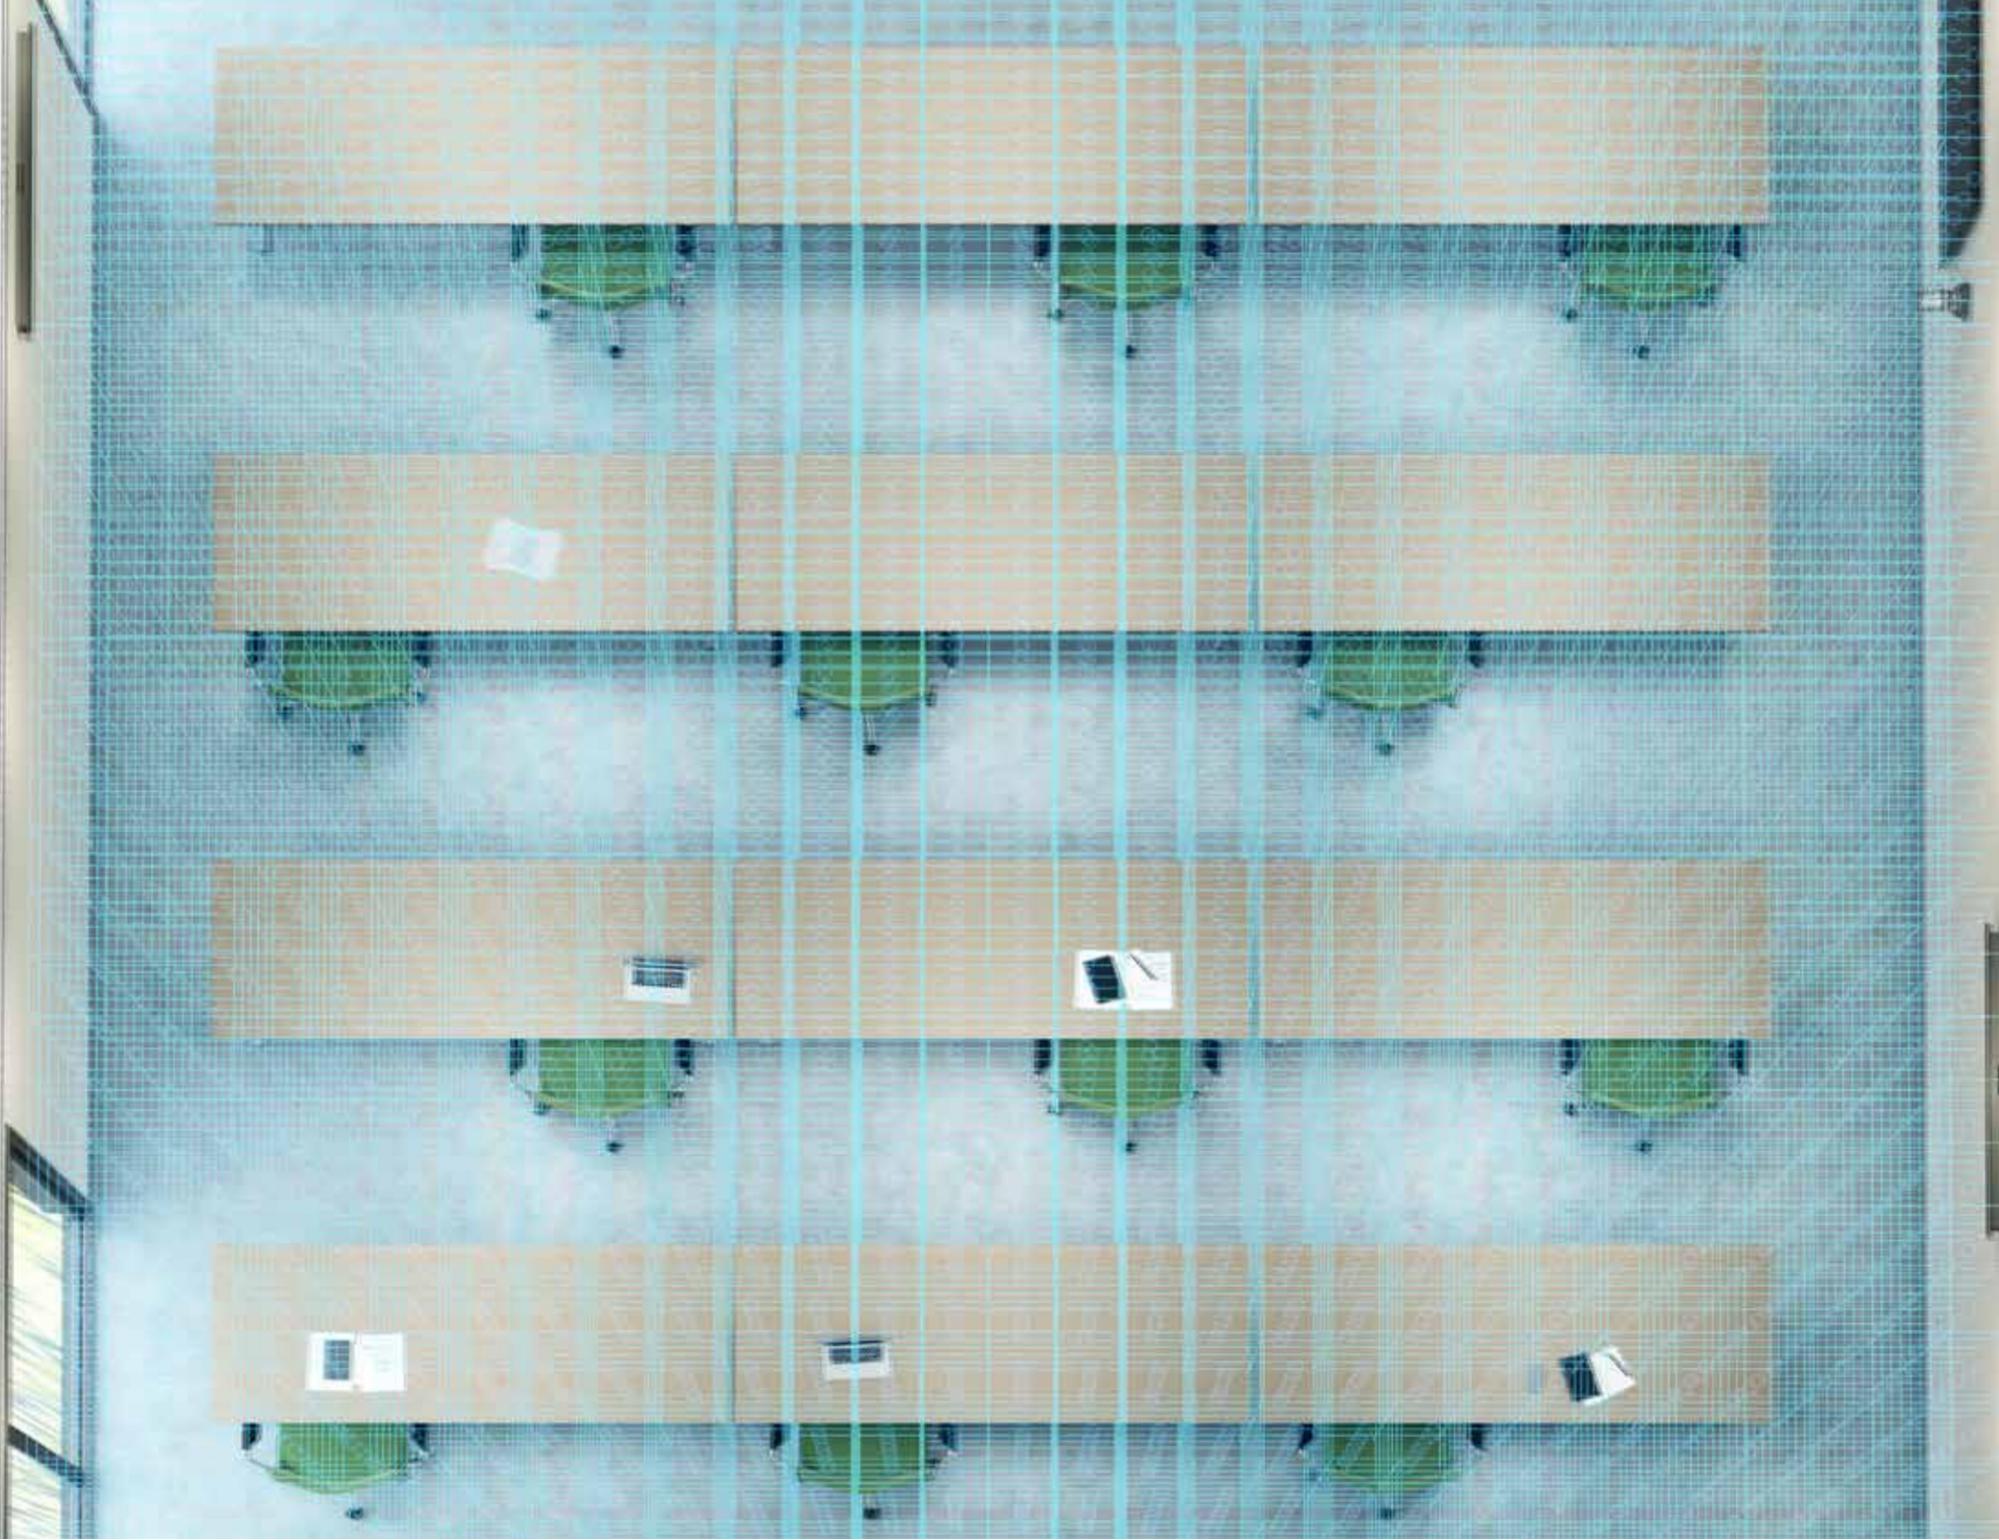

- Ensure voices in the classroom are picked up, no matter how far apart students and instructors are
- Enable remote learners to hear in-class students clearly, with no need for those students to leave their seats or share a microphone
- Let instructors teach naturally without worrying about lapel mic batteries or dead zones

SIMPLE AUDIO FOR COMPLEX TIMES

- Install a system in less than 30 minutes (60 minutes for a Dual HDL300) with no need for specialized technicians
- Reconfigure a learning space as much as you need – the system will automatically adjust
- Keep things simple with USB connectivity and a system that works with your choice of UC&C platform

SOLUTIONS YOU CAN COUNT ON

- Minimize classroom visits with secure, cloud-based tools that let IT staff manage systems from anywhere
- Keep your audio conferencing systems performing well over time with firmware updates and added software functionality
- Be prepared for whatever changes come next with technology that's flexible and adaptable

Microphone Mist technology

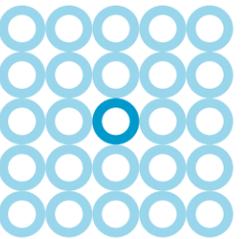

THE EVOLUTION OF CLASSROOM AUDIO

Nureva's groundbreaking Microphone Mist technology fills a classroom with thousands of virtual microphones, so everyone can be heard, from everywhere. It's the brains behind every Nureva audio system.

BUILT FOR THE NEW REALITY

Postsecondary institutions are under tremendous pressure to deliver high-quality education, no matter what happens. Microphone Mist technology keeps you nimble and offers clear advantages over other approaches.

FULL-ROOM COVERAGE

No matter where a student or instructor is speaking in the classroom, there's always a virtual microphone nearby. Students learning remotely will have the same experience as those learning in person.

CONTINUOUS AUTOCALIBRATION

With continuous autocalibration, no one needs to make manual adjustments or install new components when a space gets reconfigured. Experiment as much as you need to get your spaces right.

NO HANDHELD MICS

With a Nureva audio conferencing system, instructors never need to wonder if a lapel mic is charged or if students are getting too close to a microphone. That's because there's no hardware to touch or share.

DISCOVER THE TECHNOLOGY | nureva.com/audio-conferencing/microphone-mist

EASY DOES IT

Instructors need to spend their energy reaching their students. There's no time to master complicated technology products. That's why we designed Nureva audio to do the hard work behind the scenes so faculty and IT staff don't have to.

MADE FOR FLEXIBILITY

Now more than ever, change is inevitable. So Nureva audio easily adapts to a variety of hybrid and HyFlex learning scenarios. And when things inevitably change again, it helps you pivot quickly to whatever you need next.

NONTRADITIONAL LEARNING SPACES

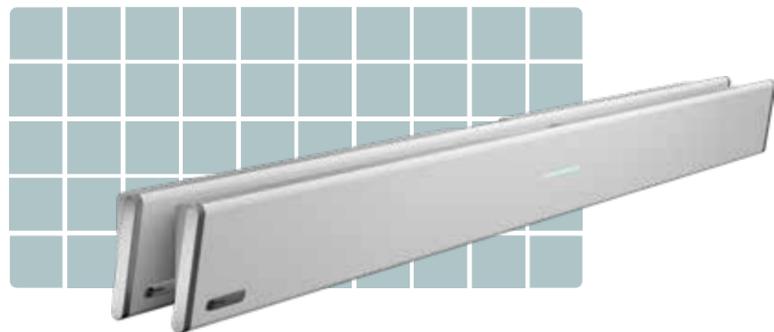

If physical distancing mandates require you to extend into other spaces, Nureva is here to help. You can turn a multipurpose room, study space, foyer or even a hallway into an audio-equipped learning space. It's as simple as mounting an HDL200 system to a mobile cart with a display and moving it where it's needed most.

HYBRID LEARNING

With full-room audio pickup, remote students can hear exactly what's going on during class, as if they were there. The system picks up the voices of students in the classroom as they answer questions, lead discussions or give presentations – all from the safety of their seats. Everyone feels engaged and connected.

ADVANCED AUDIO CONFERENCING FOR ALL YOUR SPACES

DUAL HDL300

AUDIO CONFERENCING SYSTEM

For microphone coverage up to 30' x 50' | 9.1 x 15.2 m

FULL-ROOM COVERAGE IN LARGE CLASSROOMS

16,384 virtual microphones offer full-room coverage in lecture halls and larger classrooms.

AUDIO FOR ALTERNATIVE SPACES

Add audio conferencing to larger flex spaces, gymnasiums and other nontraditional learning spaces.

DIY INSTALLATION

Install in around 60 minutes, with no need to hire a technician and almost no classroom downtime.

SPECS | nureva.com/audio-conferencing/dual-hdl300#spec

HDL300

AUDIO CONFERENCING SYSTEM

For microphone coverage up to 25' x 25' | 7.6 x 7.6 m

FULL-ROOM COVERAGE IN MID-SIZE CLASSROOMS

8,192 virtual microphones offer full-room coverage in mid-size classrooms and learning spaces.

AUDIO FOR ALTERNATIVE SPACES

Add audio conferencing to multipurpose rooms, hallways and other nontraditional learning spaces.

DIY INSTALLATION

Install in around 30 minutes, with no need to hire a technician and almost no classroom downtime.

SPECS | nureva.com/audio-conferencing/hdl300#spec

HDL200

AUDIO CONFERENCING SYSTEM

For microphone coverage up to 18' x 18' | 5.5 x 5.5 m

FULL-ROOM COVERAGE IN SMALL SPACES

4,096 virtual microphones offer full-room coverage in small learning spaces.

FOCUSED PICKUP IN LARGER ROOMS

Set your coverage zone to the front of the room to focus audio pickup on the instructor's voice.

FLEXIBLE INSTALLATION OPTIONS

Install almost anywhere in around 30 minutes, or mount on a mobile cart to move from room to room.
